

# PRECAUTIONARY BOIL WATER ADVISORY

## For the Brazos MDWCA

### BOIL YOUR WATER BEFORE USING

Due to on-going drought, possible maintenance issues and leaks that occurred during June 2026. The **Brazos MDWCA** is advising its water consumers to boil water prior to consuming.

Extreme low pressure or no pressure occurrences such as those experienced during a water outage, may increase the likelihood of microbiological contamination within the distribution system. Although no contamination has currently been detected as a result of this water outage, customers of **Brazos MDWCA** are still encouraged to boil their water until further notice.

#### What should I do? What does this mean?

- **DO NOT DRINK THE WATER WITHOUT BOILING IT FIRST.** Bring all water to a boil, let it boil the water for one minute before drinking, cooking, washing fruits and vegetables, feeding a baby, brushing teeth, preparing drinks, making ice, and providing drinking water for pets. More details about precautions can be found in the following fact sheet: [https://www-archive.env.nm.gov/wp-content/uploads/sites/5/2019/10/Boil\\_NMDOHNMED\\_7.13.16.pdf](https://www-archive.env.nm.gov/wp-content/uploads/sites/5/2019/10/Boil_NMDOHNMED_7.13.16.pdf)
- **Although, no contamination has currently been detected in the Brazos MDWCA system, \*Fecal coliforms and E. coli are bacteria whose presence indicates that the water may be contaminated with human or animal wastes. Microbes in these wastes can cause diarrhea, cramps, nausea, headaches, or other symptoms. They may pose a special health risk for infants, young children, and people with severely compromised immune systems.\***
- The symptoms above are not caused only by organisms in drinking water. If you experience any of these symptoms and they persist, you may want to seek medical advice. People at increased risk should seek advice from their health care providers about drinking this water.

#### What is being done?

A 6,000-gallon potable water tanker has arrived from the Albuquerque Water Authority The water tank is located across from the Cliffview Restaurant. The system is being actively evaluated and repaired as quickly as possible. When repairs are made to the water system, we will conduct special monitoring to ensure that the system is free of microbial contamination. In addition, we will inform you when you no longer need to boil your water. We anticipate resolving the problem within two months.
